Re: Agency Decision – De Minimis

Dear Mr. Pearson,

As required under §3.5 of the EAC's Voting System Testing and Certification Program Manual, Election Systems & Software and Wyle Laboratories have provided the necessary information in order to verify that the following changes are de minimis and do not require any additional testing:

- 1. ECO 000702 Add alternate part number for the SW1 (Cherry Switch E63-10A) and change revision level to A.
- 2. ECO 000839 The caster mounting nut on the base plate support of the DS200 ballot bin was changed from a standard nut to a weld nut.

Based on the review of the documentation above the EAC has determined that the changes do not negatively impact any ES&S Unity system certified by the EAC to the 2002 Voting System Standards (2002 VSS). The EAC therefore approves the proposed changes. Please update and resubmit your TDP and system identification tools to reflect the changes made to the certified system.

If you have any questions or need further information, please do not hesitate to contact Brian Hancock or James Long at your earliest convenience.

Date: 6/20/11

Sincerely,

Brian Hancock

Director of Voting System Testing and Certification
